

Instructions to Download and Run Tenure

1. Go to Ian Bogost's website to download the tenure zip file (the setup is only available for windows) <http://bogost.com/writing/blog/tenure-the-game/>
2. This game requires .NET version 1.1.4323. You can download that from: <https://www.microsoft.com/en-ca/download/details.aspx?id=26>
3. Run the dotnetfx.exe file. You will probably need to run this as administrator by right clicking the file.
4. Once .net installs, unzip tenure and navigate to tenure setup file and run it.
5. The game will appear on your desktop. Enjoy!

Note: I found that the game was only accessible for 60 days and after that it gave the message to download it again. Take full advantage of the 60 days! :)
